Project ID 1811: Section 6 Quality control review notification

Dear Biofilica team, dear RINA team,

Verra is opening a quality control review of the Jari/Para REDD+ project (ID 1811) VCS/CCB registration following Section 6 of the *VCS Registration and Issuance process, v4.3*.

Next steps

Verra will issue a project review report. Once the report is issued, Rina must provide a written response to the findings raised by Verra in the project review report. Until the review is closed, any further issuance is suspended, and the project status will remain “on hold” on the Verra Registry.

Background to the review:

RINA issued a validation report for the Jari/Para REDD+ project (ID1811) on 15 October 2019. Based on this validation report and after an accuracy review, Verra registered the project under the VCS and the CCB programs.

On 27 November 2019, RINA issued a verification report for the period 08 July 2014 to 22 October 2017. Based on this verification report, Verra has issued 900,752 VCUs.

In February 2023, Verra has at its discretion opened a Section 6 quality control review in accordance with Verra's Registration and Issuance process (6.1.1). If non-conformances are identified the validation and verification body will be required to respond and conduct a root cause analysis.

This letter serves as a notification of the quality control review and will be uploaded to the Verra Registry.

Sincerely,

Marie Calmel

NCS, Senior Technical Manager, VCS Program Management
